Version 3.3.1 - July 7, 2025

Version 3.2.1 - April 25, 2025

Version 3.1.11 - April 25, 2025

Version 3.1.8 - April 4, 2025

Version 3.1.7 - April 4, 2025

Version 3.1.3 - March 13, 2025

Version 3.1.2 - February 21, 2025

Version 3.3.1

Release Date: July 7, 2025

Enhancements and New Features

EUI000161

Download DBT Report (Project Metrics Panel)

Users can now download the **DBT project report and documentation**. The generated report includes a comprehensive overview of the project, along with detailed information on dependencies, models, sources, and references.

EUI000162

DataMatch Automation (Data Matching Panel)

The Data Match Automation feature now supports one-time configuration by combining multiple data sources. This enables to generate a consolidated report with

matched results from all configured sources, streamlining the comparison process and improving efficiency.

NUI000163

Merlin Panel

A new Merlin Panel has been introduced, featuring two key modules:

- **Merlin AI** - An AI powered assistant designed to help users ask contextual questions and retrieve relevant information. The interface is divided into two sections: the left panel serves as the input area for user queries, while the right panel displays the AI-generated responses.
- **Insight** - The Insights tab (Executive Summary) provides a centralized overview of key analytics derived from the SAS-to-Python/cloud migration analysis.

NUI000164

Dependencies View (Converter Panel)

It consists of two options:

- **Dependencies Checklist** - The Dependencies Checklist is a **SAS file analysis report** that can be viewed at both the project and file levels. It provides a **risk analysis** for each file within the project.
- **Merlin Insights** - Merlin Insights offers a visual representation of a comprehensive migration analysis dashboard at both the project and file levels.

NUI000165

Synthetic Data (Converter Panel)

The Synthetic Data feature within **Execution tab**, enables to seamlessly test or execute a block of code by auto-generating meaningful **sample data** for the required input dataframes or tables.

NUI000166

Validate (Converter Panel)

A Validate button has been newly introduced within **each block**. This feature allows for the validation of the SAS code contained in the block and utilizes AI to generate a detailed analysis of the original SAS code. Additionally, it provides an equivalent Python code representation.

NUI000167

Column Lineage (File Level Panel)

A new mode called Column Lineage has been added to the file-level panel. To access this mode, enable Column Lineage from the Actions menu. The view switches from Data Lineage to Column Lineage mode.

NUI000168

Engine System Config (Settings Panel)

Engine System Configuration has been added and is view only for administrators. It displays the engine system JSON, where flag changes can be saved.

EUI000169

Migration-Projects Panel

While creating a new migration project, Google Cloud Storage is now available under the Source Setup, and Apache Iceberg is available under the Target Setup.

EUI000170

Search Option (Migration Job Panel)

A search functionality has been added, enabling users to locate projects or pipeline names within the list of executed jobs.

EUI000171

Filter Option (Migration Job Panel)

A 'Filter by Project' dropdown has been added, allowing selection of a project to display only the migration jobs related to that project.

EUI000172

Sort By Status (Migration Job Panel)

Project names can now be sorted alphabetically in ascending (A–Z) or descending (Z–A) order.

EUI000173

New Migration Pipeline (Migration Job Panel)

Selecting a project will automatically create a new automated pipeline and execute it upon clicking 'Run Pipeline'.

NUI000174

Running Tab (Migration Job Panel, Data Matching Panel)

Jobs with a 'Running' status can be viewed in the Running tab.

EUI000175

Source Type (Migration Projects Panel)

AWS S3 files can now be selected as a source type during the Source Setup step when creating a new migration. Upon selecting AWS S3, the following dynamic fields will be displayed: Remote Connection, Bucket Name, S3 Path, and File Extension.

EUI000176

Scan objects (Migration projects panel)

The 'Prepare Object' button has been renamed to 'Scan Objects', which prepares and fetches objects for migration.

NUI000177

More Option (Migration Projects Panel)

The 'Scan All DDL' feature displays the DDL list for all projects and provides options to copy scripts to the clipboard, download them as .txt or .sql files, refresh the list, and Run all DDLs.

EUI000178

Column Mapping (Migration Projects Panel)

In the Info section, migration object details are provided, including file path, file name, file extension, file size, and file format.

NUI000179

Audit Log (Converter Panel, File Dependency Panel)

An 'Audit' option has been added under the 'Action' menu in the Converter panel. This feature allows users to view detailed logs related to the file.

NUI000180

User RBAC Settings (Global Settings Panel)

'Manage Access' option within projects is now controlled exclusively by administrators. Non-admin users can no longer grant or modify this permission.

NUI000181

File Manager Settings (Global Settings Panel)

The File Manager tab can now be restricted by an admin user. The 'File Manager Settings' section within Global Settings is now hidden from non-admin users.

EUI000182

Notifications

A 'Refresh' button has been added to the Notifications. Clicking this button will load the latest 20 notifications.

NUI000183

DDL (File Level Panel)

A new DDL feature has been added to the File Level panel, enabling users to fetch the DDL statements for specific tables.

NUI000184

Highlight DataSource (File Level Panel, Data Matching)

Here, direct source or target for the file is displayed in the lineage. The block is specified as direct target or source.

EUI000185

Block Code (Converter Panel)

Within the Modified section of Block Code, there is an option to compare the Staging code with the Dist code.

EUI000186

Execution Mode (Converter Panel)

In Execution Mode, for each code block, there is an option to compare the Dist code with the Staging code.

NUI000187

Migration (Data Migration Panel)

The Migration tab facilitates seamless data migration from local environments to supported remote platforms. Key features include:

- **Add Migration Project:** Create a migration project through a guided three-step process
- **Source Setup:** Currently supports Local File with file path and extension options
- **Target Setup:** Currently supports Snowflake with remote connection options
- **Column Mapping:** View and manage object's column-level mapping

NUI000188

Migration Job (Data Migration Panel)

After initiating a migration job, users can monitor the execution status and view detailed logs under the Migration Job section.

EUI000189

Upload Dist File (Converter Panel)

Enhancements have been made to how dist files are handled during uploads. Each uploaded dist file will be saved as a new file with a timestamp appended to the filename.

EUI000190

Configure Report (Datamatch Panel)

After selecting the source and target file paths and file type, the Primary Key and Compare Column fields will now display a dropdown list of available column names from the files.

EUI000191

Execution Status (Converter Panel)

The execution status is now displayed, wherein after initializing and running the pipeline, each block is checked individually, and its status is shown. The possible statuses for each block are: **Passed**, **Success** and **Not Executed**.

EUI000192

Add project (Projects Panel)

New fields have been added to the "Add Project" tab:

- **Source Platform:** SAS, IBM DataStage, Oracle ODI, Teradata BTEQ, Alteryx, Informatica, Qlik, Snowflake, and Databricks
- **Deployment Tool:** DBT, Informatica, and Airflow
- **Target Platform:** PySpark, Pandas, Snowflake, Snowpark, AWS Redshift, Google BigQuery, Databricks, Fabric, and Teradata

NUI000193

Datamatch Overview (File Metrics panel)

The DataMatch overview now provides recent job execution details for three components: the **Direct Source**, showing the latest execution for initial tables; the **Direct Target**, reflecting the final tables; and the **Intermediate Tables**.

NUI000194

Execution Overview (File Metrics panel)

The Execution Overview provides details related to the execution mode in the Converter panel, including execution time, language used, total number of blocks, and the status of each block.

EUI000195

Projects Panel

The project cards have been enhanced to display additional information, including the tool name, the icon of the selected source platform, and the chosen target language.

EUI000196

Project Metrics Panel

The project banner has been enhanced to display the icon of the source platform, along with a loader for the image.

EUI000197

License tab

A Refresh button has been added to the License tab. And the Update button within the Add License section is now disabled until a valid license key is provided.

EUI000198

External CDN Links

All external CDN links have been removed from the APIs for improved security and performance.

EUI000199

Configure Report (Datamatch Panel)

In the Configure Report section, new fields have been added to allow selection of file paths for both source and target browsers.

Bug Fixes

BUI000134

Delete Project (Projects Panel)

Resolved an issue where, after deleting a project without removing its associated files, creating a new project with the same name would display the previously associated files.

BUI000135

Download Report (File Metrics Panel)

Fixed an issue with incorrect file status reporting in the Download Report. The file status is now accurately reflected in the report based on the current stage of the file.

BUI000136

Pre-Processor (File Manager Panel)

The Pre-Processor button is now disabled for files located within the Raw folder in the File Manager panel.

BUI000137

MerlinAI (Converter Panel)

MerlinAI is now removed upon clicking the node in the Converter panel when the Execution mode is set to 'On'.

BUI000138

Sort By (Datamatch Panel)

The Reset option within the Sort By functionality has been fixed and now works as expected.

BUI000139

File Dependencies Panel

In dark theme mode, the Copy Path button for each node has been updated to align properly with the dark theme.

BUI000140

External Links

All external CDN links have been removed from the APIs for improved security and performance.

BUI000141

Add New Project (Projects Panel)

In the 'Add New Project' section, under the project image field, an error message 'Directory not found:' is now displayed when no images are available.

BUI000142

Upload Files (Project Metrics Panel)

During file uploads, a loading indicator is now displayed while the file format is being validated. Invalid format files show an error icon.

BUI000143

Configure Report (Data Matching Panel)

In the Configure Report section, within the File Path field, a new **Browse File** option has been added.

BUI000144

Download Option (File Manager Panel)

The issue with the Download button in the File Manager has been resolved. The download functionality is now working as expected.

FUI000145

Panel Issues

Resolved issues related to the right-side panel in the Converter, ensuring improved stability and a smoother user experience.

FUI000146

Execution tab (Converter Panel)

The **Pandas** language no longer requires a connector to initialize sessions.

Version 3.2.1

Release Date: April 25, 2025

Enhancements and New Features

NUI000161

Connectors Panel

A new **Connectors** feature has been introduced under **Global Settings**, enabling seamless integration with external environments such as cloud platforms. Key features:

- **New Connectors:** Create new connections for Snowflake, Databricks, BigQuery, AmazonS3 environments
- **View Connectors:** View all existing and newly created connections
- **View Config:** Displays configuration details in JSON format
- **Close/Activate Connector:** Manage connection states
- **Delete Connector:** Remove inactive connections

NUI000162

Execution tab (Converter Panel)

The **Execution Mode** feature in the **Converter panel** now enables users to run converted code directly within the interface. Key features:

- **Language Selection:** Currently supported connectors include Snowflake, Snowpark, and Databricks
- **Session Initialization:** Run connection code to initialize the session
- **Code Execution Controls:** Run, Interrupt, and Restart Kernel options available
- **Session Management:** Switch execution language by shutting down current session

EUI000163

Initialize the Session (Converter Panel)

Session initialization is now supported at the file level using the file's converted execution language. The **Run Pipeline** button allows full file execution with block-level failure tracking.

EUI000164

Configure Report Updates (Data matching)

The Configure Report section has been enhanced with dynamic fields:

- **Sampling ratio:** Percentage of source rows to be randomly selected
- **Source and target type:** Local (CSV, JSON, Excel, Text, Parquet, SAS7BDAT) and Snowflake support
- **Primary key:** Identifies unique rows
- **Compare columns:** Specifies columns to be compared
- **Source and target filter:** Filter datasets based on column conditions

Version 3.1.11

Release Date: April 25, 2025

Enhancements and New Features

EUI000159

Refresh (Projects Panel)

Now, when a new project is created, it loads within a few seconds and appears directly on the landing page without needing a manual refresh.

EUI000160

General Reports (Data Matching)

Data matching can now be performed directly without using individual blocks. In General Reports, users can configure reports, monitor execution logs under the Execution tab, and access detailed results in the Reports tab.

Dataset Reports: Retain previous data matching functionalities, allowing users to match data individually within specific blocks of a file.

Bug Fixes

BUI000133

Download Report (Project Metrics and File Metrics Panel)

The issue with downloading reports has been resolved. Reports now download instantly within the Metrics panel without displaying a loader.

Version 3.1.8

Release Date: April 4, 2025

Enhancements and New Features

NUI000149

File Status (File Metrics Panel)

In **File Metrics**, file status is now visible. Uploaded files from Project Metrics are automatically analyzed and marked **Analyzed**. After conversion, the status updates to **Converted**.

NUI000150

Cumulative Nodes (Project Level Panel)

When the number of blocks exceeds 10, cumulative nodes become visible. The start and end blocks remain displayed, with Lineage highlighted. The Threshold value can be adjusted in the Data Lineage settings.

EUI000151

Overview & Usage (Project Level Panel, File Level Panel)

In **Data Lineage**, clicking a node opens **MerlinAI**, showing **Overview and Usage** sections. The **Lineage Table** displays upstream/downstream dependencies.

EUI000152

Code (File Manager Panel)

In File Manager Panel, **double-clicking** a file in any folder displays the available code within the file.

EUI000153

Project Banner (Project Metrics Panel)

The selected **project color** is now displayed on the project banner in the Project Metrics panel, along with the owner's name, project description, and selected image.

EUI000154

Block Code Guide

A detailed guide providing a comprehensive description of each tab in Block Code is included.

EUI000155

Data Stage Icons (Converter Panel)

New icons have been added to the workflow lineage in the Converter panel, based on the data stage labels.

EUI000156

New Theme Color

A new theme color labeled 'theme14' has been added under Custom Themes.

EUI000157

Download Project Report (Project Metrics Panel)

In Project Metrics, under **Download Project Report**, two options are now available:

- **Download Report** - downloads the overall project metrics
- **Download Comprehensive Report** - provides a ZIP file containing metrics for each individual file

EUI000158

Column Lineage (File Level Panel)

In the File Metrics panel, each node now includes a column displaying the Column Lineage table. This table provides information on the source and target columns, source type, source table, and operation type.

Bug Fixes

BUI000130

Glitch Issue (Project Level Panel)

Resolved a glitch in the workflow lineage of the Project-Level panel that was caused by heavy images.

BUI000131

Download Workflow (Converter Panel)

Resolved a glitch in the workflow lineage of the Project-Level panel that was caused by heavy images.

BUI000132

Alignment

Fixed the alignment of breadcrumbs and the file count display under the project label across all tabs.

Version 3.1.7

Release Date: April 4, 2025

Enhancements and New Features

EUI000144

ToolTip

Added a tooltip for **project names** in the sidebar to enhance usability by displaying the full project name on hover in the Development Panel, Data Lineage Panel, Workflow Panel, Data Match Panel, and Log Sense Panel.

NUI000145

License (Profile)

Under the SAS2PY License section, users can view details about their current license:

- **Usage Limit:** Displays maximum lines that can be analyzed and converted
- **Validity:** Shows license start date, end date, and upload date
- **Registration:** Provides details such as licensed user, email, and company

NUI000146

File Overview within MerlinAI (File Level)

When a user clicks on any node in MerlinAI, an overview of the node is displayed, including:

- **Lineage Table:** Displays details on upstream and downstream datasets
- **Block Lineage:** Shows upstream and downstream block IDs

NUI000147

Toggle ToolTip (Converter panel)

A toggle tooltip has been added within Actions. When the tooltip is **off**, hovering over the block code displays only the **SAS code**. When turned **on**, it shows the **converted code**.

EUI000148

Clear All (Notifications)

Previously, only the **Mark all Read** option was available. Now, a **Clear All** option has been added to allow users to clear all notifications at once.

Version 3.1.3

Release Date: March 13, 2025

Enhancements and New Features

NUI000117

Project Image (Projects Panel)

This feature enables users to select an image for the project from the available options, which will be displayed under the Project Metrics panel.

NUI000118

Choose Project Color (Projects Panel)

This feature allows users to select a color for the project, which will be displayed on the project cards on the landing page.

NUI000119

Update Language Option (Projects Panel)

This feature enables users to select a language for the project from the available options and set it as the default.

NUI000120

Upload Files (Project Metrics Panel)

The Project Metrics Panel includes a Upload Files feature that allows users to add multiple files (**.egg, .sas, .zip**) directly to a specific project. All uploaded files are analyzed by default.

NUI000121

Analyze Folder (Project Metrics and File Metrics Panel)

The enhanced **Analyze Folder** option allows users to analyze project files that have not been fully processed or were recently added. Additionally, **Reanalyze Folder** option is available.

NUI000122

Convert Folder (Project Metrics and File Metrics Panel)

The enhanced **Convert Folder** option efficiently converts any project into required language. Additionally, **Reconverter Folder** option is available.

NUI000123

Notifications

When a folder in the **File Manager** panel is converted, the system redirects to the **Converter Panel** of the file only if all **processed blocks** are complete.

NUI000124

Add Mapping (Data Mapper Panel)

The Add Mapping functionality enables users to define relationships between source and target entities across different data sources. Based on the selected Mapping Type (**e.g., Database, Lib Name, or Connection**), users can input source values and target values.

EUI000125

Lineage

The lineage design has been enhanced to improve accessibility across the converter, project level, file level, file dependencies, and data matching panels.

NUI000126

Redirection (Projects Panel)

Clicking on a **project card** on the landing page redirects users to the **Project Metrics** panel.

NUI000127

Language Settings (Global Settings)

Allows users to select a default language from the available list of languages.

NUI000128

Date-Time Format Settings (Global Settings)

There are 10 different date and time formats available, allowing users to select a default format of their choice.

NUI000129

Guide (Data Mapper Panel, Converter Panel)

1. A guide has been added to the **Data Mapper panel** to provide users with an overview of the Data Mapper and its modules.
2. A guide has also been included within the **Block Code section of the Converter panel**, offering users a summary of metrics, code, docstring, and code similarity.

EUI000130

Settings (Global Header Bar)

Users can now select the default conversion language, date and time format, and language from the Global Header Bar.

EUI000131

File/Graph Layout (Converter Panel, Project Level Panel)

Users can customize the visual arrangement of files by selecting from the following layout options: Vertical, Horizontal, Radial, Force-directed.

EUI000132

Convert File

The Synapse language has been updated to **Fabric** language. **Teradata** language has also been added within the Convert File feature.

EUI000133

Theme Color

The UI default theme color is now set to **Snowflake**.

NUI000134

Sort Filter (Converter Panel, Project Level and File Level Panel, Data Matching Panel)

Users can now sort the projects and files in ascending or descending order using the sort filter. This feature is available in the Converter Panel, Project Level Panel, File Level Panel, and Data Matching Panel.

EUI000135

Login path

The login URL has been updated from **/login** to **/uilogin**.

EUI000136

Log Status(Data Match panel)

In the Data Match Panel under Execution, the job log now displays the status as **Matched, Mismatched, or Failed**.

NUI000137

Loader (Converter Panel)

In the Converter Panel, within the **Full Code Editor**, a loader has been added to indicate progress while converting code under the Modified Code section.

NUI000138

Announcements Tab

Users can view a detailed list of **New Features** and **Enhancements** of the UI under the Announcements section.

NUI000139

Toggle tooltip (Converter Panel)

A **Toggle tooltip** has been added under **Actions**. When the toggle tooltip is **off**, hovering over the block code of the node displays only the **SAS code**. When turned **on**, the **converted code** is shown.

NUI000140

Logo

The logo image can be uploaded through the **config file**.

NUI000141

Pre processor (File Manager Panel)

The Pre processor option is now available under the **Raw folder**. It facilitates the preprocessing of the Raw folder and moves the processed files to the Cleaned folder.

EUI000142

Breadcrumbs

Users can now view the **project folder name** in the breadcrumbs as a tree structure.

EUI000143

MerlinAI

1. When **block code** is opened, MerlinAI is displayed by default on the right-side panel.
2. In the **Data Match report**, MerlinAI is displayed by default on the right-side panel.
3. When any **node** is clicked, MerlinAI appears on the right-side panel.
4. A snackbar notification has been added to alert users when the MerlinAI server is down.

Bug Fixes

BUI000128

Edge Relations (File Dependencies Panel)

Fixed an issue where edge relations of nodes were not visible in the File Dependencies Panel. Users can now view edge relations, and the option to disable them under Settings has been removed.

BUI000129

Previous and Next Buttons

Resolved an issue with the Previous and Next buttons in the Original and Modified Code sections within Block Code, ensuring they now function properly.

Version 3.1.2

Release Date: February 21, 2025

Enhancements and New Features

NUI000032

Files Overview section (Project Metrics Panel)

A Files Overview section is added to the dashboard, offering users a summary of:

- Total Files
- Analyzed Files
- Converted Files
- Validated Files
- Reconciled Files
- Accepted Files

NUI000070

Projects Panel

Role-Based Access Control (RBAC) is implemented to differentiate between Administrator and Non-Administrator. Administrator is granted access to view the Project Owner's name for each project to facilitate project management and oversight.

NUI000071

Manage Access (Projects Panel)

Permission levels for projects are implemented, allowing the Project Owner to assign roles to other users:

- **Viewer** - Provides read-only access to the project
- **Editor** - Allows users to view and modify the project as needed

EUI000073

File Filter (Converter Panel)

The Converter module includes a **File Filter** feature, allowing users to selectively display blocks in the lineage by filtering them based on Node Type, associated Block Labels, and current Status.

EUI000079

Data Matching Panel

The Data Matching Panel includes the following Report features:

- **Report Summary:** Detailed job information including dataset count and status
- **Dashboard:** Visual representation of Data Match results through various chart formats
- **Column Overview:** Comprehensive view of columns including match percentages
- **Row Overview:** Detailed row-level information
- **Download Option:** Export table data as CSV
- **Preview Report:** View in JSON, HTML, PDF, CSV, and Excel formats

EUI000082

Account Settings Tab (Settings)

Users have access to an Account Settings page, where they can view their account details and update or change their password.

EUI000083

User Management section

The **User List** tab allows the administrator exclusively to:

- View a list of all users, categorized as online or offline
- View the last login date and time of each user
- Online users cannot be deleted
- Offline users can be deleted

The **Add User** tab allows the administrator to add new users.

NUI000089

Converter Panel

The Converter Panel includes a Download functionality that allows users to download Files or Workflows in their preferred format, such as Notebook, HTML, or Python.

NUI000105

Block Code (Converter Panel)

In the Converter Panel, under Block Code, the **Traverse Lineage** and **Traverse Sequence** dropdowns are introduced:

- **Traverse Lineage** displays upstream and downstream block codes within the original code
- **Traverse Sequence** shows the block codes in sequential order within the original code

NUI000107

Full Code Editor (Converter Panel)

In the Converter Panel, the Full Code Editor includes the following features:

- **Original Code:** Users can view Raw, Cleaned, Analyze, and Staging files
- **Compare Code:** Users can compare any two files side by side
- **Save Code feature:** Allows users to persist modifications
- **Modified Code:** Two folders, Dist and Staging, are available for use

EUI000114

MerlinAI

MerlinAI is an AI assistant designed to help users ask questions and retrieve relevant information based on their context. It offers both global and project-specific assistance:

- **Global MerlinAI:** Accessible from the navigation bar
- **Project-Specific MerlinAI:** Available in each panel for context-specific assistance
- **MerlinAI in Functional Panels:** Integrated into Converter, File Level, File Dependency, and Data Matching panels

NUI000115

OKTA Login Integration

It supports Okta authentication with SAML-based Single Sign-On (SSO), enabling users to securely login using their Okta credentials. Key highlights:

- Single Sign-On (SSO) with Okta and SAML for a smoother login experience
- Improved security and compliance with enterprise authentication policies
- Simplified access management for organizations

NUI000116

Data Mapper panel

The Data Mapper module is designed for mapping data across various data sources, including:

- **Database:** Connectivity with multiple databases, offering insights into source and target metadata
- **Lib Name:** Managing and configuring library references for data sources
- **Connection:** Setup and management of database connections
- **Add Mapping:** Define relationships between source and target entities
- **Refresh:** Dynamically updates the interface
- **Create:** Initiate new data mappings

Bug Fixes

No bug fixes in this release
